

# Setup GIT in your Local system

## #1 Installing GIT in local

1. Download the Windows 64-bit installer from the below location.  
<https://git-scm.com/download/win>
2. Use all the default options to install GIT in the local system.
3. Confirm that GIT is installed, by executing the below command in PowerShell or command prompt.

```
git --version
```

The expected output should look below

```
git version 2.33.0.windows.2
```

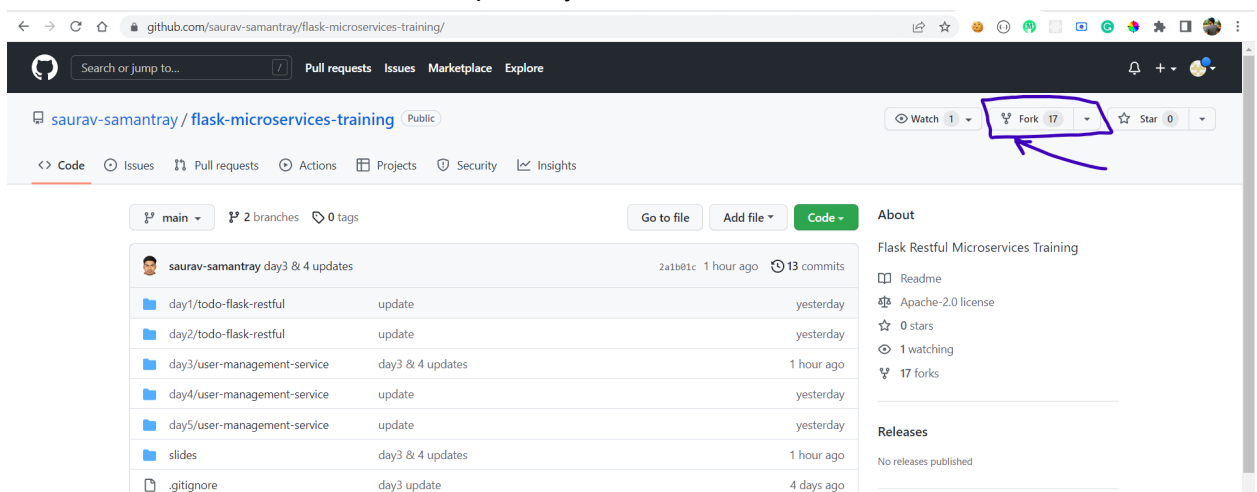

## #2 Creating a GitHub account

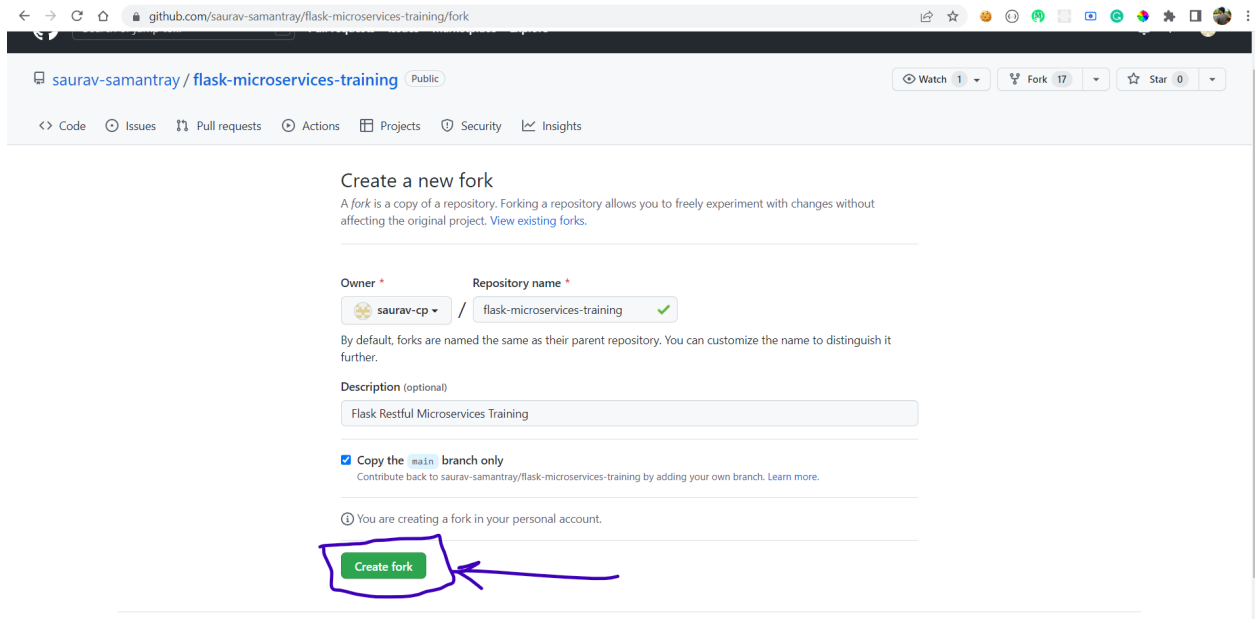

If you already have a GitHub account, you can skip this section and move to #3

1. Go to the below link  
<https://github.com/signup>
2. Fill out the required details and create an account.

## #3 Forking a repository

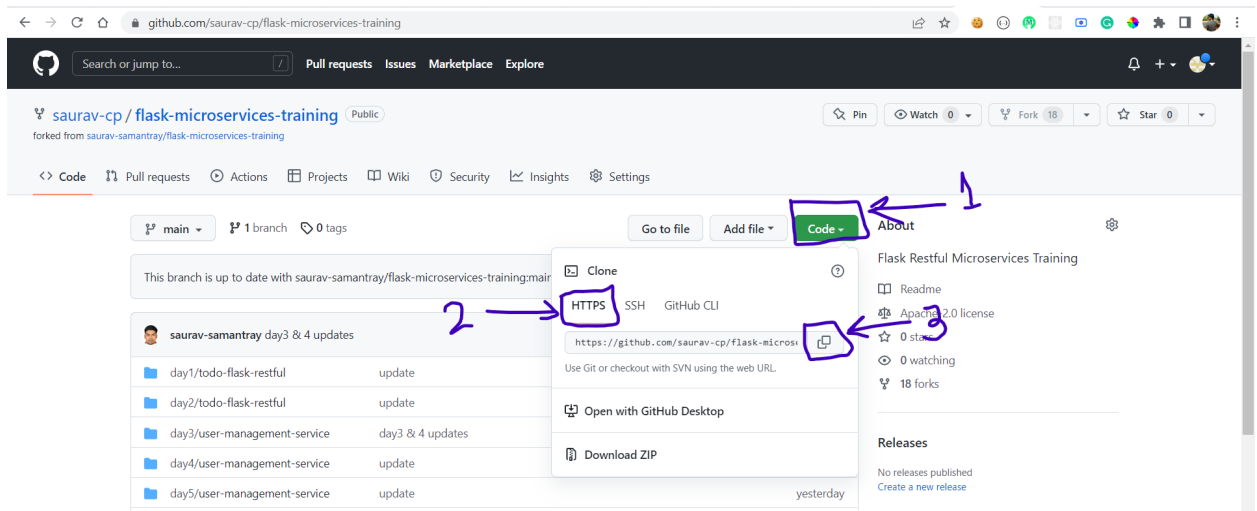

1. Go to the below link  
<https://github.com/saurav-samantray/flask-microservices-training/>
2. Click on the fork button to fork the repository.

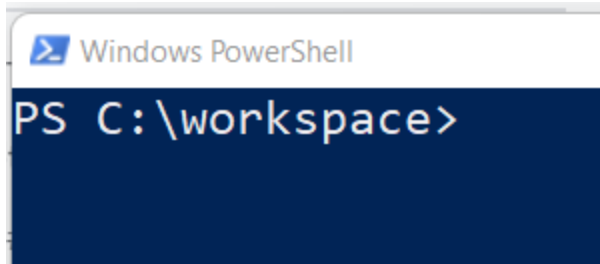

## #4 Cloning the forked repository to your local

1. Copy the HTTPS link from your forked repository. Screenshot reference below.

2. Open Powershell or command prompt and navigate to your workspace folder. If you dont have one, create a workspace folder under C drive.

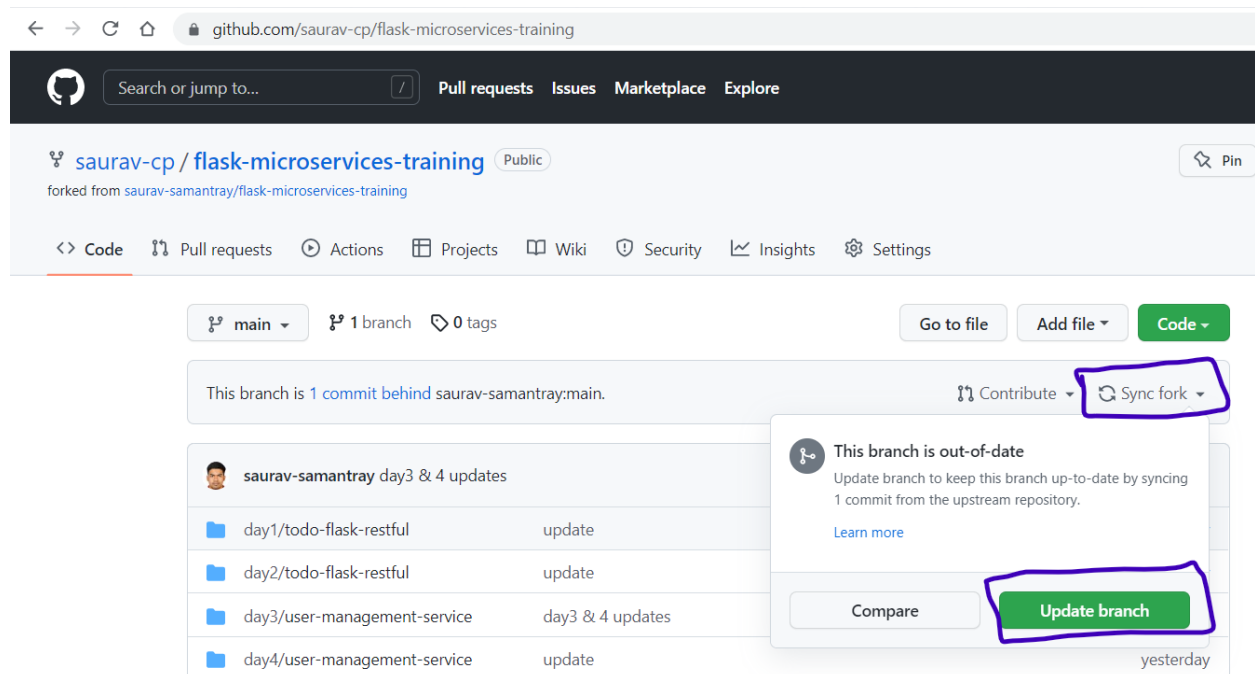

```
Windows PowerShell
PS C:\workspace>
```

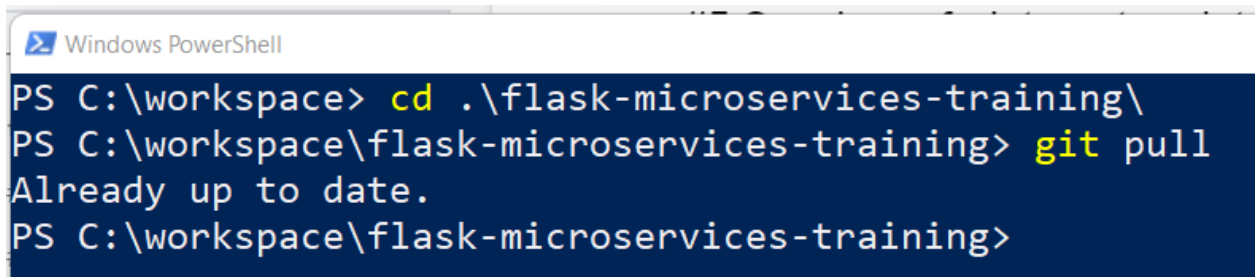

3. Execute the below command to clone the repository that was copied in step number 1.  
`git clone https://github.com/<your-username>/flask-microservices-training.git`

## #5 Syncing a fork to get updates

1. Perform the Sync Fork action from GitHub. Reference screenshot below.

2. Navigate to the folder in PowerShell or Command Prompt and execute **git pull** command.

```
Windows PowerShell
PS C:\workspace> cd .\flask-microservices-training\
PS C:\workspace\flask-microservices-training> git pull
Already up to date.
PS C:\workspace\flask-microservices-training>
```

## #6 Update local GIT configuration

Before you can issue **git commit** or **git push** command, you will have to set the below config.

NOTE: This is a one-time process and need not be executed for each commit or push.

***git config --global user.email "you@example.com"***

***git config --global user.name "Your Name"***

To commit your changes to local repository

***git commit -m "Meaningful commit message"***

To push your changes to remote repository

***git push***
